PROFESSIONAL SUMMARY

Applied Machine Learning Engineer with an MSc in Robotics and AI, experienced in building end-to-end ML pipelines, data-driven systems, and backend-integrated applications using Python and PyTorch. Strong foundation in algorithms, experimentation, and model evaluation, with hands-on experience in Docker, MLflow, and production-oriented ML workflows.

EDUCATION

University of Glasgow (UK)

Sep 2022 - Sep 2023

MSc Robotics and Artificial Intelligence

Grade: Merit

College of Engineering, Trivandrum (India)

Aug 2018 - Jul 2022

B.Tech Applied Electronics and Instrumentation Engineering

CGPA: 8.65/10

WORK EXPERIENCE

Independent AI / ML Engineer

Dec 2023 - Present

- Designed and implemented end-to-end ML pipelines for real-world problems, including data preprocessing, model training, evaluation, and deployment.
- Formulated practical problems into machine learning tasks (classification, estimation, and retrieval-based systems) and defined measurable evaluation metrics.
- Built experimentation workflows to compare model performance using structured evaluation and iterative improvements.
- Applied MLOps practices including Docker-based containerization and MLflow for experiment tracking and reproducibility.
- Developed backend services and APIs to integrate ML models into usable applications.

Graduate Teaching Assistant – University of Glasgow

Jan 2023 - Jun 2023

- Evaluated coursework for 100+ students, focusing on correctness, efficiency, and problem-solving approaches.
- Supported students in understanding algorithms, modeling techniques, and engineering concepts.

PROJECTS

Phishing Website Detection System

2026

Python, Scikit-learn, MLflow, Docker, AWS

- Built a supervised learning system to classify phishing websites using structured features from a dataset of 11K+ samples.
- Designed data pipelines for ingestion, validation, and preprocessing, ensuring consistency and reliability.
- Evaluated model performance using appropriate metrics and conducted iterative experimentation to improve accuracy.
- Implemented reproducible training pipelines using MLflow and containerized workflows using Docker.

Financial Sentiment Analysis Engine

2025

Python, PyTorch, Hugging Face

- Developed NLP models for sentiment classification using transformer-based architectures (BERT, RoBERTa).
- Designed experiments to compare model performance and improve classification accuracy over baseline models. Built modular pipelines for preprocessing, training, and evaluation.

AI-Powered Stock Assistant

2024

Python, Flask, APIs, Docker

- Built a decision-support system integrating real-time financial data with ML-driven query processing.
- Designed retrieval-based pipelines to incorporate external data into model responses. Developed backend services using Flask and deployed using Docker.

TECHNICAL SKILLS

Programming

Python, Java, SQL

Machine Learning

PyTorch, Scikit-learn, TensorFlow, Hugging Face

ML Systems

Model Evaluation, Experimentation, Feature Engineering, Data Pipelines

MLOps & Backend

Docker, MLflow, Git, FastAPI, Flask
